

Guidelines for the design of the bench

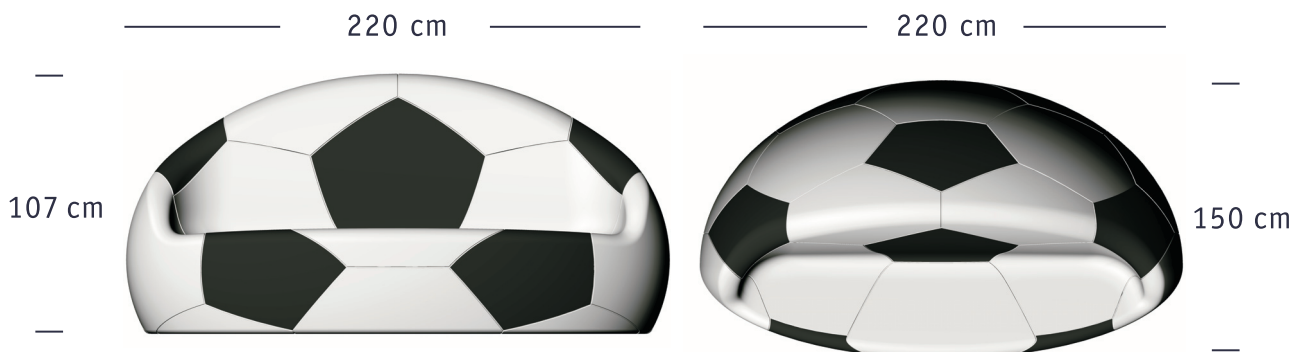

Designing the bench, we set high value in creating a comfortable and enjoyable seat. After extensive testing the profile of the seat came out ideal which is confirmed by the very positive feedback of every user.

The specialty of the design is the insulated seat and back rest with a 40 mm PU-foam layer. This prevents cooling down of the body contact areas even at low temperatures.

Every aspect of the bench is engineered to be very long-lasting which makes the bench useable for decades considering that a little maintenance is always needed.

All in all an urban seating furniture with fun, comfort and memories.

Technical data bench 4

Material: GRP, glass fibre reinforced polyester resin, highly abrasion resistant varnishing for long-term outdoor use. Seat and back rest are insulated with a 40 mm PU-foam layer. The bench is highly robust and can carry heavy loads.

Weight: approx. 85 kg, integrated water ballast system with a capacity of approx. 450 l, to be filled through a stainless-steel filler cap. The water charge refills automatically with every rain shower.

Can be used as an barrier at public events.

For the interior use the bench can be partially glued to the floor to have it remain in the desired area.

The design is internationally protected.
